DETAILED ACTION

Claim Rejections - 35 USC § 103

Claim Rejections - 35 USC § 103

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 to 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schrems.

The Schrems reference teaches a method of predicting oxygen contents in cz silicon wafers, note entire reference. After formation of a silicon wafer by the czochralski method, calculations are preformed to the wafer. The initial concentration of oxygen is taken and a thermal history is done. From these parameters, a calculation can be done to determine the density and amount of precipitation of oxygen when the heating is actually done note pages 400,402. The sole difference between the instant claims and the prior art is the specific heat treatment temperatures. However, in the absence of unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable heat treatment range in the Schrems reference in order to best determine the oxygen concentration and behavior so that better results are obtained.

Claims 4 to 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schrems.

The Schrems reference is relied on for the same reasons as stated, supra, and differs from the instant claims in the storage medium. However, in the absence of

Art Unit: 1714

unexpected results, it would have been obvious to one of ordinary skill in the art to determine through routine experimentation the optimum, operable way to do the calculations in the Schrems reference in order to speed the results.

Response to Applicants' Arguments

Applicant's arguments filed June 4, 2010 have been fully considered but they are not persuasive.

Applicants' argument concerning the Schrems reference is noted. However, the reference does teach other and different modeling formulas from the one argued by applicants. The other modeling means are closer to the instantly claimed means of determining. Therefore the reference does in fact render the instantly claimed invention obvious to one of ordinary skill in the art. The reference does teach to one of ordinary skill differing means.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Art Unit: 1714

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert M. Kunemund whose telephone number is 571-272-1464. The examiner can normally be reached on 8 hours.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Kornakov can be reached on 571-272-1303. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
